

PWP Framework — Progressive Writing Practice

Version 1.0 — May 2026 *Designed from first principles. Replaces the previous 67-level model.*

The Core Principle

PWP exists to make grammatical learning permanent through deliberate daily practice. Pupils learn a concept in the classroom, then immediately apply it in PWP — and keep applying it as new concepts are added on top. The goal is not formula completion. It is internalisation: the pupil can manipulate word classes fluently, instinctively, and purposefully.

The Three Layers of a PWP Session

Layer 1 — The Formula Chain (Sentence Evolution)

A session is built around one subject noun. The pupil writes a simple sentence using that subject, then rewrites it N times — each rewrite following a new formula that adds or restructures a grammatical element. The sentence grows in complexity. By the final step, it is the most technically sophisticated sentence the pupil can currently construct.

The subject noun stays constant throughout the session. The teacher may set a weekly class theme noun, or pupils may choose their own.

Each step of the chain:

1. The pupil sees their previous sentence (for reference)
2. They see the formula instruction — e.g., *"Now add an adverb that tells the reader HOW"*
3. They write a completely fresh sentence from scratch, incorporating the new element
4. The AI assesses the sentence: does it correctly follow the formula? Is it grammatically sound?
5. Feedback is given. The pupil may revise, then advances to the next step.

The chain length is not fixed at 12. It is determined by how far the pupil has progressed through the WriFe curriculum. A pupil after L10 has 3–4 formula steps available. A pupil after L15 has 8–10. A Y5–6 pupil working through compound/complex sentences may have 12+ steps. The chain grows with the curriculum.

The final sentence of the chain is always the most technically complex sentence the pupil can write at their current level. This becomes the topic sentence (Lead) of their paragraph.

Layer 2 — The Paragraph

Once the formula chain is complete, the pupil writes a short paragraph using their final sentence as the anchor.

Part	Content	Constraint
Lead (Topic Sentence)	The final formula sentence from the chain	Already written — pupil uses it as-is
Support (2–3 sentences)	Pupil develops the idea freely	No formula constraint — free writing
Close (Concluding Sentence)	Pupil writes one final sentence	Must be more technically complex than the support sentences — AI-assessed

The paragraph is introduced to the pupil only after L26 (Paragraph Structure) has been taught. Before L26, sessions end with the formula chain only.

Layer 3 — The Mastery Quiz

Before a pupil's chain length increases (i.e., before a new formula step is added to their chain), the system presents a mastery quiz for the new formula element.

How the quiz works:

- The AI generates a series of formula instructions, varying the permutations (different subjects, different tenses, different verb types including phrasal verbs, different sentence purposes)
- The pupil constructs a sentence for each prompt
- The AI assesses correctness
- The quiz is passed when the pupil demonstrates consistent control across the permutations — not a fixed count, but qualitative mastery as judged by the AI
- On passing: the new formula step is added to their chain for future sessions
- Teacher can always override and manually advance or hold a pupil

The Formula Library — Design Principles

The formula library is **curriculum-anchored** and **compositional**. It is not a fixed list of 28 or 67 items. It is a map of formula elements — each tagged to the WriFe lesson that introduced it — that combine to generate formula steps dynamically.

Curriculum Anchor Map

WriFe Lesson	Concept Introduced	Formula Elements Unlocked
L7	Nouns + Determiners	noun, determiner + noun
L8	Common/Proper Nouns	proper noun as subject
L9	Main + Helping Verbs	verb (main), helping verb + verb
L10	Present/Past/Continuous Tense	verb (present), verb (past), is/was + verb-ing — PWP launches
L11	Subject + Verb + Object	subject + verb + object
L12	Adjectives	adjective + noun, adjective + object
L13	Adverbs	verb + adverb (how), verb + adverb (when), verb + adverb (where)
L14	Pronouns	pronoun as subject replacement
L15	Prepositions	prepositional phrase (in/on/under/before/after/beside...)

WriFe Lesson	Concept Introduced	Formula Elements Unlocked
L18	Statements + Questions	question form (auxiliary + subject + verb + object?)
L19	Commands + Exclamations	imperative (verb + object), exclamative (What/How + adjective + noun!)
L20	Phrases	noun phrase, adverb phrase, prepositional phrase as named units
L21–22	Clauses	independent clause, dependent clause, subordinator
L25	Simple Sentence Patterns	subject + verb + adverbial, fronted adverbial (adverb, + subject + verb)
L26	Paragraph Structure	Paragraph phase of PWP activates
L30	Compound + Complex Sentences	clause + FANBOYS + clause, subordinator + clause + , + main clause
L32	Noun/Adjective/Adverbial Phrases	stacked/embedded phrases as modifiers
L33	Transitions	transitional phrases at sentence openings
L49–51	Cohesion devices	reference words, connectives, adverbials for flow

How the Formula Chain Is Generated

Given a pupil's current curriculum position (i.e., the highest lesson they have studied), the system:

1. Looks up all formula elements available at that position
2. Generates a chain of steps from simplest to most complex, using only available elements
3. Each step adds or restructures exactly one element relative to the previous sentence

Example: Pupil who has completed up to L13 (Adverbs)

Available elements: determiner, noun, proper noun, helping verb, main verb, tense (present/past/continuous), subject, object, adjective (noun/object), adverb (how/when/where)

Generated chain: | Step | Formula | Example | |-----|-----|-----| | 1 | noun + verb (past) | Sam ran. | | 2 | noun + verb + object | Sam ran the race. | | 3 | determiner + noun + verb + object | The boy ran the race. | | 4 | determiner + noun + verb + determiner + object | The boy ran the long race. (*wait* — *adj at L12*) | | 4 | adjective + noun + verb + object | The tall boy ran the race. | | 5 | determiner + noun + verb + adjective + object | The boy ran the long race. | | 6 | determiner + noun + verb + object + adverb (how) | The boy ran the race quickly. | | 7 | determiner + noun + verb + object + adverb (when) | The boy ran the race yesterday. | | 8 | adverb + , + determiner + noun + verb + object | Yesterday, the boy ran the race. (*fronted* — *wait, L25*) | | 8 | helping verb + noun + verb + object? | Did the boy run the race? (*question* — *L18*) |

The system generates the correct chain based on exactly which lessons are unlocked. The teacher also sees the chain before the session and can adjust any step.

Example: Pupil who has completed up to L30 (Compound/Complex)

Chain adds: compound sentences (FANBOYS), subordinate clauses (when/because/although/if), relative clauses, fronted adverbials. Chain length: 10–12 steps. Final sentence may be a multi-clause construction.

Adaptation (Natural Differentiation)

There are no year-group gates and no fixed timelines. Pupils advance through the formula chain based entirely on demonstrated mastery of each formula element. A capable Y3 pupil may have a chain length of 8. A pupil who needs more time at Y5 may still be consolidating compound sentences at chain length 6.

The teacher can see every pupil's current chain length and formula position in the dashboard. They can manually accelerate or slow any pupil without system restrictions.

The weekly subject theme provides a common anchor for the class, but the chain length — and therefore the complexity of each pupil's sentence evolution — varies naturally with the individual.

Session Summary: What the Teacher Sees

For each completed session, the teacher sees:

- **Subject noun** used
 - **Each formula step**: the formula instruction + the pupil's sentence
 - **AI feedback** at each step (pass / needs revision / explanation)
 - **The paragraph** (Lead + Support + Close) with AI assessment
 - **Mastery quiz results** (if a quiz was presented this session)
 - **Chain length** at start and end of session
 - Option to **add teacher comment** on any sentence or on the paragraph as a whole
-

What This Replaces

The existing PWP Studio (67 levels, one sentence per session, no sentence evolution, no paragraph phase) is retired. The new system builds on the correct pedagogical intent from the start.

The PWP Chain tab (daily tracking, weekly theme, subject noun) is preserved and extended — it becomes the session log for this new model.

Key Open Questions Before Build

1. **Formula chain teacher control**: Should the teacher be able to manually compose a custom chain for a session (select exactly which formula steps, in what order), or does the system always auto-generate the chain from the curriculum position and the teacher only approves/adjusts it?

2. **Session trigger:** Does a pupil start a new session each time they log in to the PWP app, or does the teacher explicitly "open" a session for the class each week?
3. **Mastery quiz timing:** Does the mastery quiz run at the end of a session (testing the formulas just practised), or is it a separate activity the pupil does on demand / when the AI judges they are ready?
4. **Paragraph at Y2–3:** Before L26, the session ends at the formula chain. But some early-developing pupils might be ready for a simpler version of the paragraph (topic + 1 support + close). Is there a lighter paragraph mode for pre-L26 pupils, or is the paragraph strictly off until L26?
5. **The subject noun and genre:** As pupils progress through L52–62 (non-fiction, different story genres), does the subject noun expand to a subject *type* (e.g., "write about a process", "write about a person") to support genre-appropriate practice?

This framework is the reference document for all PWP development. Update this file whenever a design decision is confirmed.
